Taurus Stock Rating System

TSL employs a 3-tier rating mechanism i.e 'BUY', 'HOLD' and 'SELL', which is based upon the level of expected return for a specific stock. When total return (capital gain + dividends) exceeds 16%, a 'BUY' rating is assigned. A 'SELL' rating is issued whenever total return is less than -6% and for return in between the 2 ranges, 'HOLD' rating is meted out. Different securities firms use a variety of rating terms/systems to describe their recommendations. Similar rating terms used by other securities companies may not be equivalent to TSL rating system. Time horizon is usually the annual financial reporting period of the company (unless otherwise mentioned in the report). Ratings are updated daily and can therefore change daily. They can change because of a move in the stock's price, a change in the analyst's estimate of the stock's fair value, a change in the analyst's assessment of a company's business risk, or a combination of any of these factors. In addition, research reports contain information carrying the analyst's views and investors should carefully read the entire research report and not infer its contents from the rating ascribed by the analyst. In any case, ratings or research should not be used or relied upon as investment advice. An investor's decision to buy, sell or hold a stock should depend on individual circumstances (such as the investors existing holdings or investment objectives) and other considerations.

Target Price and Risk Disclosures

This could be a result of many factors which may include (but not limited to) geographic mix and introduction of improved products or service offerings by competitors. The results of operations may be materially affected by global economic conditions generally, including conditions in financial markets. The company is exposed to market risks, such as changes in interest rates, foreign exchange rates and input prices. From time to time, the company may enter into transactions, including transactions in derivative instruments, to manage/offset certain of these exposures. Where a target price is provided, the valuation methodology used to determine such target price has a reasonable basis and is accompanied by material risk disclosures that may impede achievement of the target price. The report clearly discloses the target price and the target date on which such target price is expected to be achieved.
